

Shaunak Rane

Date of Birth – 29-05-2007

shaunak.rane@universalai.in

ACADEMIC QUALIFICATIONS			
Year	Qualification	Institute	Percentage
2028	Btech	Universal Ai University, Mumbai	Pursuing
2024	12th	People Education Society, Thane	63%
2021	10th	IES Chandrakant Patkar Vidyalya, Dombivli	86.2%

INTERNSHIPS		Total Duration- 3 Months
Univitt Ai Technologies	Software Project Trainee	April 2025 – July 2025
♣ Gained technical understanding of BOM (Bill of Materials) and KOT (Kitchen Order Ticket) structures, enabling efficient mapping of food preparation workflows. ♣ API Development & Integration: Developed high-performance RESTful APIs using FastAPI, enabling real-time communication between the backend prediction engine and the web interface (Matches "HTTP/HTTPS" and "Networking" requirements). ♣ Designed and implemented data pipelines for collecting and preprocessing hostel food consumption data using Python ♣ Developed machine learning models (Regression & Time Series) to predict meal demand and optimize ingredient procurement, reducing overall food waste. ♣ Designed and structured the website architecture and UI/UX flow using HTML, CSS, and JavaScript, ensuring smooth integration with backend components. ♣ Collaborated with teammates to integrate the ML prediction module into a Fast API -based web application, enabling real-time insights for kitchen management. ♣ Conducted model evaluation, performance tuning, and testing to ensure prediction accuracy and scalability.		

Projects
Project Aegis Agentic Ai -Mis Information ♣ Developed a real-time, multi-agent AI system to autonomously detect, analyze, and debunk misinformation from social media and news sources. ♣ Engineered a Python backend using FastAPI, orchestrating six autonomous agents (powered by the Gemini API) to perform tasks like source profiling, web-based evidence gathering, and advanced reasoning. ♣ Implemented a custom-trained ML model for linguistic pattern detection and a real-time data pipeline using Supabase (PostgreSQL) to feed a live-monitoring dashboard via WebSocket. ♣ Designed RESTful API endpoints for debugging, monitoring agent status, and injecting demo data, ensuring robust system testability and maintenance. ♣ Designed and deployed RESTful API endpoints for system monitoring, debugging, and real-time status checks. ♣ Integrated Cloud-hosted PostgreSQL (Supabase) to manage real-time data ingestion and persistence via WebSockets. Github - https://github.com/Sh Shaunakrane914/MisInfo
Yield Ai KrushiMitra – Farmers Friend ♣ Developed a mobile-first, responsive web application using React and TypeScript to provide AI-powered crop yield predictions for farmers in Odisha. ♣ Built a clean, intuitive, and accessible user interface tailored for non-tech-savvy users, utilizing Radix UI for components and Tailwind CSS for styling. ♣ Engineered an interactive frontend allowing users to select districts, crops, and adjust weather parameters (rainfall, temperature) to receive instant yield forecasts. ♣ Designed the application to present complex data (predicted yield, historical comparisons, confidence ranges) in a simple, understandable format to aid in agricultural decision-making. ♣ Designed a modular backend architecture (Microservices concept) by separating core application logic from a dedicated calculation service. Github - https://github.com/Sh Shaunakrane914/Yield-Ai
Food Waste Management ♣ Developed a full-stack, Flask-based food management application to handle menu generation, inventory, and Bill of Materials (BOM) calculations. ♣ Designed and implemented a modular, dual-database architecture in MySQL, separating core application data (rafeedo DB) from a dedicated microservice for BOM calculations (bom1 DB). ♣ Engineered the BOM calculation module to process weekly menus and dish-to-ingredient mappings, enabling precise inventory and cost analysis. ♣ Managed all database schema setup, including manual SQL table creation for the BOM service and configuring secure app-level

database connections. ♣ Engineered data pipelines to handle user inputs (weather parameters) and fetch instant predictions via backend integration. Github - https://github.com/Shاونakrane914/Food-Management
Swiggy Data Analysis – Dashboard
♣ Developed an interactive dashboard using Power BI/Tableau to analyze Swiggy's sales and outlet performance, visualizing KPIs like total sales (151.94K) and average rating (3.93). ♣ Engineered dynamic filters for outlet location, size, and item type, enabling stakeholders to drill down into specific performance metrics and make data-driven decisions. ♣ Conducted time-series analysis to identify a declining trend in new outlet establishments from 2012 to 2018. ♣ Analyzed and segmented data to reveal key business insights, such as "Supermarket Type1" being the highest sales driver (787.55K) and "Tier 3" locations performing strongly (78.13K). Github - https://github.com/Shاونakrane914/Swiggy-Data-Analysis-Dashboard
Fire Fighting Robot – Arduino Uno
Developed an autonomous fire-fighting vehicle capable of detecting and extinguishing fire using flame and temperature sensors integrated with an Arduino Uno microcontroller. The system was programmed to navigate towards the fire source, activate a water pump, and extinguish the flames automatically. Implemented motor control through L293D driver modules and optimized sensor placement for accurate detection. This project demonstrated practical applications of IoT, robotics, and embedded systems in safety automation.

Additional Skills	
Certifications	- Completion Badge in Introduction to Generative AI from Google Cloud. - Statement of Accomplishment in Understanding Prompt Engineering from DataCamp. - Verified Certificate in AI for Everyone: Master the Basics (AI0101EN) from IBM (via edX). - Completion Badge in Introduction to Large Language Models from Google Cloud. - Completed Microsoft Office Automation (Office 365) course from Eduwings Computer Institute. - Certificate of Completion in Learn C Programming from CodeChef. - Completion Badge in Introduction to Responsible AI from Google Cloud. - Completion Badge in Applying AI Principles with Google Cloud from Google Cloud. - Skill Badge in Prompt Design in Vertex AI from Google Cloud. - Verified Certificate in Climate Change: Carbon Capture and Storage (CCSx) from The University of Edinburgh (via EdinburghX) - Completion of ISC101.1x: IT Fundamentals for Business Professionals: Enterprise systems
Skills	- Python Programming - Google Cloud Platform (GCP), Git & GitHub (Version Control), REST API Integration, CI/CD Concepts. - HTML, CSS & JavaScript - Full Stack Web Development (Flask / MERN) - Statistics & Probability for Data Science - Database Management (SQL & NoSQL), PostgreSQL (Supabase) - Machine Learning & Data Analysis - Data Visualization (Power BI / Matplotlib / Seaborn) - NumPy & Pandas for Data Processing - Version Control (Git & GitHub) - API Integration & RESTful Services

Achievements & Extra-Curricular
Junior Maths Olympiad – 5,6th Standard Silver Medal Junior Maths Olympiad – 8th Standard Consolation Prize Maharashtra Scholarship Prize – 5th and 8th Grade
